---

## PROFESSIONAL SUMMARY

---

Backend engineer with 5 years of professional experience building and maintaining Java / Spring Boot systems for public-sector healthcare (Catalan Health Department). Focused on clean architecture (hexagonal, DDD), REST API design, testing rigour and observability. Comfortable owning features end to end — from domain modelling to Dockerised deployment and CI. Currently deepening expertise through portfolio projects and technical assessments while targeting mid-level backend roles in product companies.

## TECHNICAL SKILLS

---

**Languages:** Java 21, PL/SQL, SQL

**Frameworks:** Spring Boot, Spring Data JPA, Hibernate, Spring Security, React.js

**Architecture:** Hexagonal Architecture, Domain-Driven Design (DDD), Microservices, Layered Architecture, REST API design, CQRS

**Databases & Caching:** PostgreSQL, Oracle SQL, Caffeine, Redis

**Testing:** JUnit, Mockito, Testcontainers, JaCoCo, JMeter

**Resilience & Observability:** Resilience4j, Prometheus, Micrometer, Grafana

**Security:** JWT, OAuth2, RS256

**DevOps & Tools:** Docker, Docker Compose, Kubernetes, Git, Maven, Jenkins, CI/CD, Caddy, WebLogic, n8n

## WORK EXPERIENCE

---

### Independent Study & Projects

*Apr 2025 – Present*

Career Break

- Dedicated a focused period to strengthening backend engineering depth (clean architecture, testing strategy, observability) and building production-grade portfolio projects from the ground up.
- Completed multiple technical assessments for product companies, applying hexagonal architecture, DDD, caching, resilience patterns and comprehensive test coverage.
- **Stack:** Java 21, Spring Boot, PostgreSQL, REST APIs, hexagonal architecture, DDD, Docker, Testcontainers

### Software Engineer

*Sep 2020 – Apr 2025*

NTT DATA — Barcelona, Spain

- Developed and maintained backend solutions for the Catalan Health Department, delivering reliable services used across public healthcare operations.
- Led the design and implementation of a module to accredit new health centres, streamlining an operational process for multiple centres / users.
- Built a dedicated COVID-19 sample-tracking application, improving traceability of samples for research and reducing manual reconciliation effort.
- Automated XML file ingestion from SFTP servers into the data platform, removing manual handling and improving data-workflow reliability.
- Adapted the Health Department's COVID-19 application to evolving pandemic scenarios under tight timelines.
- **Stack:** Java, Spring Boot, Spring Data JPA, PostgreSQL, Oracle SQL, PL/SQL, React.js, REST APIs, WebLogic, Talend, Git

## Backend Developer — Internship

Oct 2019 – Jun 2020

Everis — Barcelona, Spain

- Maintained and extended Health Department applications, developing new features in Java and supporting production systems.

## Data / ETL Developer — Internship

Nov 2018 – Aug 2019

Everis — Barcelona, Spain

- Performed database maintenance and implemented ETL processes using Talend Studio.

## PROJECTS

---

### Pokémon Ranking REST API — Technical Assessment

- Production-grade Spring Boot REST API built with hexagonal architecture andDDD; accepted in a competitive technical evaluation.
- Caffeine caching, Resilience4j (retry / circuit breaker), and Prometheus + Micrometer metrics for observability.
- ~91% test coverage (JaCoCo) with JUnit, Mockito and Testcontainers; multi-stage Docker build and detailed documentation.

### Impostor Game — Real-time Party App

- Full-stack "social deduction" game (Among Us-style) with a Spring Boot backend following hexagonal architecture andDDD.
- Stateless JWT authentication and a clean domain model separating game rules from infrastructure.

### Product Pricing API — Technical Assessment

- Spring Boot REST API for retail price resolution using PostgreSQL range types and layered architecture.
- Caffeine caching plus JMeter load testing to validate performance under concurrent access.

### Personal Homelab & Automation

- Self-hosted infrastructure on Ubuntu Server: all services containerised with Docker Compose, reverse-proxied by Caddy and exposed securely via Cloudflare Tunnel (no port forwarding).
- Automation pipelines with n8n (Telegram bot, daily job-offer scoring, tech digest).

### MataroViva — Hackathon (1st place, Feb 2019)

- Web app for creating neighbourhood events to improve use of public spaces; awarded first place at SomHackathon.

## EDUCATION

---

### Engineering in Computer Management & Information Systems

2016 – 2020

TecnoCampus Mataró-Maresme (UPF), Mataró, Spain

### Baccalaureate in Technology

2014 – 2016

IES Argentona, Argentona, Spain

## LANGUAGES & INTERESTS

---

**Languages:** Catalan (native), Spanish (native), English (Conversational)

**Interests:** Self-hosting & homelab, weightlifting, trekking, reading.
